

Oviku® Smart Lock

The first pick and bump proof smart lock

Secure your locks and your dreams

At home, we want to feel safe. When we're away, we want to feel our home is safe. The nightmare of someone breaking into our house is sometimes enough to keep us awake at night.

Your dreams and your locks are now secured with a unique and patented Oviku Smart Lock, the first pick & bump proof smart lock on the market.

The best protection for your locks

A mechanical cylindrical lock is always a security risk. Locks evolve, but so do the arts of picking and bumping. And even the most sophisticated locks are useless when confronted with stolen or copied key. The age of 3D printers has also made the key-copying alarmingly easy.

Oviku Smart Lock is the first and the only smart solution that protects your existing, already installed locks against lock picking, bumping and stolen or copied keys.

Smart safety

Using your smartphone as the key, you can easily control the access to your home wherever you are. Key sharing is as easy as sending a text message. And your home remains pick and bump proof even when you're away.

Safe with us

Oviku Smart Lock is installed on the interior side of your door. Only the interior part of your lock is changed. The exterior part of your lock remains the same and your keys work as before.

With the Secured locking stage selected on Oviku Smart Lock, your outdoor lock is deactivated and it cannot be unlocked from the outside even with the right key.

Safe exit

In an emergency, for example in case of a fire, numerous locks and chains can take precious time to unlock. Oviku Smart Lock unlocks the door quickly and easily without a separate key. Oviku Smart lock is not too high to reach quickly and the locking knob and the opening switch are light to operate. This enables easy and safe use by the children and the elderly as well.

Easy retrofit installation

The retrofitting Oviku Smart Lock can be installed on most common locks and it's easy to do by yourself. Just five minutes with a screwdriver and your lock and your dreams are secured with style, quality and Finnish design.

Feel secure. Feel Oviku.

3 locking stages

Open - the door is not locked and can be opened from the outside without a key

Locked - the door is locked, but can be opened from the outside with a key

Secured - The pick and bump proof protection is activated, denying access from the outside even with a proper key.
